

2024 FISH SPAWN

PROJECT	PRINCIPLE FISH SPAWNING PERIOD FOR OPERATIONAL CONSIDERATIONS ¹	OPERATION START DATE	TARGET STARTING ELEVATION	DESIRED MINIMUM OPERATIONAL ELEVATION	END OF 4 WEEKS	ENDING DATE	CURRENT STATUS
LANIER (BUFORD)	01 April - 01 June	01-Apr	1071.48	1070.98	29-Apr	29-Apr	Complete
WEST POINT	01 April - 01 June	28-Apr	632.18	631.68	26-May		Ongoing
GEORGE	15 March - 15 May	26-Mar	188.57	188.07	23-Apr		Complete ³
SEMINOLE (WOODRUFF)	01 March - 01 May	23-Mar	76.94	76.44	20-Apr		Ongoing
APALACHICOLA RIVER	01 April - 01 June			WCP			
ALLATOONA	15 March - 15 May	26-Mar	838.43	838.43	23-Apr	23-Apr	Complete
OKATIBBEE	01 April - 01 June	15-Apr	341.97	341.47	13-May		Ongoing

1. The goal is to manage the reservoir or river conditions for 4-6 weeks within this 8 week period, if conditions allow. Steady lake levels may be impossible to achieve during floods and droughts.

2. Basin conditions and operational limitations impacted the ability to maintain steady lake levels for a 4-6 week period during the identified spawning period

* Following the Water Control Manual Plan (WCP) and the Biological Opinion issued by the FWS
